GROUP PREDICTOR BOT V4

Super Admin Control Center & Master Operator Reference Guide

Bot Name:	Group Predictor Bot	**Bot Handle:**	@Group_predictor_bot
Master Owner ID:	8741198488 (@HxIndonesia)	**Log Chat ID:**	8741198488
Framework:	Aiogram 3.x / Python 3.11+	**Architecture:**	SQLAlchemy 2.0 Async / Multi-Group

1. Master Control Center (/master)

The **Master Control Center** is an exclusive 24-module graphical control hub accessible only in private chat with the bot by Master Owner (8741198488). Any unauthorized attempt immediately rejects access and dispatches a CRITICAL alert to the private log.

- **All Connected Groups:** Live overview of every group, member counts, and bot rights.
- **Bot Permissions Checker:** Verifies deletion, ban, invite, and pin capabilities.
- **Security Center:** Real-time toggles for Anti-Spam, Anti-Link, Anti-Raid, Bad Words, Fonts, Captcha.
- **Global Analytics:** Aggregated activity metrics across all connected communities.
- **Maintenance Mode:** Instant system-wide lockdown of non-admin interactions.

2. Triple Ownership Engine

A revolutionary multi-layer group control system giving the Master Operator permanent, unassailable authority:

A. Auto Master Crowning

Whenever the bot joins a new group or is promoted to administrator, it automatically checks if the Master Owner is present. If present, the bot silently promotes Master to Full Super Admin / Co-Owner with 100% permissions. If Master is absent, the bot creates a Secret Admin Invite Link and DMs it directly to the Master's private inbox with 1-click access.

B. Immortal Owner Shield

Monitors administrator role transitions 24/7. If any rogue admin attempts to demote, mute, or restrict Master Owner, the shield triggers in 0.5 seconds: it immediately strips all rights from the attacking admin, restores Master Owner to full rights, and logs a CRITICAL security alert.

C. Virtual Supreme Sovereign (/crownme & /coowner)

Regardless of who created the group, Master Owner is recognized as the supreme sovereign. The /crownme command can be run in any connected group to instantly claim all administrative rights.

D. 1-Click Admin & Co-Owner Shifting (/shiftadmin & /shiftowner)

Seamlessly swap responsibilities between administrators in a single command. /shiftadmin <new_id> copies all rights to the new admin and demotes the old one. /evacuateadmins instantly demotes all non-master administrators during emergencies.

3. Ghost & Stealth Operations

A. Ghost Spy Logger

Automatically captures and compares message edits. When a user edits a message in any group, the bot preserves the original text and alerts the Master inbox with the exact diff (original text vs edited text).

B. Traitor Admin Trap

Detects rogue admin behavior (such as mass kicks or bans exceeding 3 actions within 60 seconds). When triggered, the bot automatically strips rights from the offending admin and locks the chat.

C. Emergency Panic Nuke (/nuke & /unnuke)

In case of raids or compromised chats, running /nuke [chat_id] puts the group into instant read-only lockdown. Running /unnuke [chat_id] restores normal permissions.

D. Ghost Remote Messenger (/say)

Send anonymous announcements to any group directly from private chat without revealing your identity: /say <chat_id> <message>.

E. Dead Man's Switch (/claimmaster)

If your primary Telegram account is compromised, send /claimmaster GP_MASTER_7788_RECOVERY_KEY from your new account. The bot will dynamically transfer master authority and log chats to the new ID.

4. Master & Group Commands Quick Reference

Complete index of all operational commands in Group Predictor Bot V4:

Command	Scope	Description & Function
`/master`	Private	Opens the 24-module Super Admin Control Center.
`/crownme`	Group	Instantly grants Master Owner full Co-Owner rights.
`/coowner`	Group	Promotes replied user to Co-Owner with all permissions.
`/shiftadmin`	Group	Swaps admin rights from old admin to new admin in 1 shot.
`/shiftowner`	Group	Transfers supreme Co-Owner status to new user.
`/evacuateadmins`	Group	Emergency solo takeover: demotes all non-master admins.
`/transferowner`	Group	Guides official Telegram ownership transfer steps.
`/checkpermissions`	Group	Inspects bot granular rights and missing permissions.
`/say <id> <text>`	Private	Posts anonymous message into specified group.
`/nuke <id>`	Any	Freezes group into emergency read-only lockdown.
`/unnuke <id>`	Any	Lifts emergency lockdown and restores chat perms.
`/claimmaster <key>`	Private	Emergency recovery of master control onto new account.
`/purge`	Group	Bulk deletes up to 100 messages from replied message.
`/delete`	Group	Deletes replied message cleanly.
`/promote`	Group	Promotes member to standard administrator.
`/demote`	Group	Revokes administrator rights from member.
`/ban & /unban`	Group	Bans or unbans member from the group.
`/mute & /unmute`	Group	Temporarily or permanently restricts member speech.
`/warn & /resetwarn`	Group	Issues warning; auto-mutes at 3 strikes threshold.
`/broadcast <msg>`	Private	Broadcasts announcement across all connected groups.

5. Deployment & Security Guidelines

Cloud 24/7 Hosting: The bot is pre-configured with render.yaml, Dockerfile, and a built-in health check endpoint (port 10000 or 7860) allowing free deployment on Render, Hugging Face Spaces, or Koyeb.

Telegram Privacy Mode: Ensure bot is promoted to Group Administrator with 'Delete Messages' permission so it can receive all group messages and execute real-time moderation.

Confidentiality: *Keep the secret token GP_MASTER_7788_RECOVERY_KEY strictly private. Never share it with untrusted parties.*
